DETAILED ACTION

Allowable Subject Matter

1. Claims 1- 5, 7- 14, and 16-20 are allowed.
2. The following is an examiner's statement of reasons for allowance: **Regarding claim 1**, the prior art does not disclose or suggest the combination of, inter alia, a method for charging a battery, comprising the steps of: supplying a charging current from a first charger to a battery through a first charging circuit, wherein the battery includes the first charging circuit and provides power to an electronic device; sensing the charging current to the battery; selectively signaling the electronic device from the battery to indicate at least one parameter of the battery as the battery is receiving the charging current; and in response to selectively signaling the electronic device, disabling a second charging circuit, wherein the electronic device includes the second charging circuit and the second charging circuit is capable of directing charging current to the battery if charging current is being fed to the electronic device from another charger. **Regarding claims 2- 5, 7, and 8**, claims are dependent upon claim 1.
3. **Regarding claim 9**, the prior art does not disclose or suggest the combination of wherein a method of wirelessly charging a battery, comprising the steps of: supplying a charging current from a wireless charger to a battery; sensing the charging current; selectively toggling between high, release~ and low states an input/output line between an electronic device and the battery to indicate to the electronic device at least one parameter of the battery as the battery is receiving the charging current, wherein the release state is a value that is between the high and low states.

4. **Regarding claim 10**, the prior art does not disclose or suggest the combination of wherein a system for charging a battery, comprising: an electronic device; a first charger; and a battery, wherein the battery supplies power to the electronic device, wherein the first charger supplies a charging current to the battery through a first charging circuit included in the battery and wherein the battery includes a charging monitor that senses the charging current and selectively signals the electronic device to indicate at least one parameter of the battery as the battery is receiving the charging current, wherein the electronic device includes a second charging circuit and is designed to disable the second charging circuit in response to the signal indicating the parameter of the battery, wherein the second charging circuit is capable of directing charging current to the battery if charging current is being fed to the electronic device from a second charger. **Regarding claims 11 - 14, 16, and 17**, claims are dependent upon claim 10.

5. **Regarding claim 18**, the prior art does not disclose or suggest the combination of wherein a system for wirelessly charging a battery, comprising: a wireless charger; a battery having a charging monitor; and an input/output line for coupling between the battery and an electronic device, wherein the wireless charger supplies charging current to the battery and wherein the charging monitor selectively toggles between high, release~ and low states the input/output line to indicate to the electronic device at least one parameter of the battery as the battery is receiving the charging current, wherein the release state is a value that is between the high and low states.

6. **Regarding claim 19**, the prior art does not disclose or suggest the combination of wherein a battery, comprising: a first charging circuit for receiving a charging current from a first charger; and a charging monitor coupled to the first charging circuit, wherein the charging monitor senses the charging current received by the first charging circuit and selectively signals an electronic device powered by the battery to indicate at least one parameter of the battery as the battery is receiving the charging current and wherein the electronic device uses the signal to disable a second charging circuit, wherein the electronic device includes the second charging circuit and the second charging circuit is capable of directing charging current to the battery if charging current is being fed to the electronic device from a second charger.

7. **Regarding claim 20**, the prior art does not disclose or suggest the combination of wherein an electronic device, comprising: a processor; an input/output line coupled to the processor; a charging circuit that receives power from a first charger; and a charging indicator; wherein the processor is operable to detect signals from a battery having a second charging circuit over the input/output line, wherein the second charging circuit receives power from a second charger, and in response to the detection of the signals, the processor is further operable to disable the second charging circuit

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

8. Applicant's arguments, see arguments, filed 7/24/09 with respect to claims 1- 5, 7- 14, and 16-20 have been fully considered and are persuasive. The rejections of claims 1- 5, 7- 14, are 16-20 have been withdrawn.
